ARIEL LAISH

AI & Salesforce Automation | Revenue Systems That Run Themselves

+972 54-641-5115 arielslaish@gmail.com LinkedIn.com/in/ariellaish **Herzliya, Israel**

I find the manual work slowing revenue teams down and replace it with automation that runs on its own: Salesforce Flows, integrations, and AI that scores, routes and summarizes. 4+ years in B2B SaaS revenue ops, contracted go to market for investor backed ventures, a global Intel program. Salesforce, HubSpot, Claude Code, Claude API, n8n, Python, SQL. Native Hebrew & English.

WORK EXPERIENCE

SALES DEVELOPMENT & REVENUE OPERATIONS
Revuze | *2025-2026*

- *Reps were grading 250K+ accounts by gut and burning sequences on bad fits. Built an AI scoring model on HubSpot data that pushed only top accounts into Salesloft automatically, tripling reply rates from **1% to 3.2%** in 7 months*
- *Leads stalled between SDRs and AEs with no clear owner. Rebuilt routing, qualification rules, lifecycle stages and validation in Salesforce Flows, so every lead hit the right rep at the right stage, cutting handoff errors by **12%***
- *Gave the AI data it could trust: traced duplicates across 4 integrated tools to their source and cleaned **6K+ records** in Salesforce and HubSpot, so scoring, routing and pipeline reports finally matched reality*
- *Turned closed lost from dead weight into live pipeline, using deal data to split lost accounts into bad timing versus bad fit, then reopening 8 high fit accounts as new opportunities at a **57% hit rate***

GTM & REVENUE OPERATIONS CONTRACTOR
Lumi, Project Midas, Aura | 2022-2025

- *Lumi: founders were making spend calls across 3 disconnected tools. Joined Shopify, Meta and payout data into one weekly KPI dashboard, moving budget to the best channels, lifting blended **ROAS to 2.7x on 10% less spend***
- *Lumi: subscribers quietly churned after month two. Isolated the drop point in the data, then ran sequential A/B tests on offer and onboarding that stretched average subscription length from 1.8 to 2.1 cycles **(+17%)***
- *Lumi: launched a US D2C brand with no in-house team, directing 3 contractors across design, sales and fulfillment and writing the playbook all 5 sales channels ran on, reaching **~$300K in revenue** with full sell through*
- *Lumi: new US tariffs put a pending reorder at risk. Modeled landed cost and unit economics under 3 scenarios and gave founders a clear call to stop a further **8,000 unit import** before it lost money*
- *Project Midas: investors needed a Web3 platform shipped on a $20K budget. Ran ops and data for **6 contractors**, taking it from blank spec to acquisition in 11 months, 2 weeks early, 8% under budget, a 4.2x+ return*
- *Aura: creators were guessing what content works. Shipped a Claude API tool built with Claude Code that benchmarks **70+ Instagram accounts** against niche leaders and tells them exactly what to post next*

OPERATIONS ANALYST- 6D PROGRAM
Intel | 2024

- *Idle tools sat unseen across 35 Intel fab sites. Wrote the SQL behind one shared reuse process every site adopted, redeploying 60 idle tools worth **~$800M** within 6 months instead of buying new*
- *Leadership double checked every number because asset records never matched. Built the program's first linked data system for 2K+ tools, audited to **under 3% error** so decisions moved without a second pass*
- *No standard reporting existed, so I authored the program's first executive pack from zero, documenting every metric so any team could run it, clearing **14 compliance criteria** to become the standard Intel still uses*

EDUCATION-
B.A. Business Administration & Capital Markets | Ono Academic College | 2021-2023

TECHNICAL PROFICIENCIES
Salesforce: Flows, Validation Rules, Objects, Reports | AI & Automation: Claude Code, Claude API, MCP, LLM Agents, n8n, Python, REST APIs | Revenue Systems: HubSpot, Salesloft, ZoomInfo | Data: SQL, Power BI, Excel
